

High-pressure pump 330Z

The type 330Z high-pressure pump provides a max. operating pressure of 1,500 bar and a max. flow rate of 319 l/min.

With operating pressures of up to 1,500 bar and nominal flow rates of up to 744 l/min, the Z-series is the ideal pump for industrial cleaning as well as for paint removal and descaling.

Proper guidance of the plunger ensures a long service life of the sealing system. The used sealing water system prevents leakage, allows for a particularly high durability of the high-pressure seals and counteracts the intrusion of air. The central valve design of the pump results in a high volumetric efficiency. Pumps with an operating pressure of 1,000 bar or more are equipped with carbide plungers, which ensure a long service life and thus low maintenance costs.

On request, the availability of an ATEX version can be checked.

Technical data									
Weight app	prox.	980 kg							
Inlet pressure connection		IG 2 ½"							
		M24x1.5							
Pressure connection with flange	M36x2								
		M42x2							
Cooling water connection		G ½"							
		426 1/min							
	min.	Depends on operation parameters							
Drive shaft		Diameter 70mm k6,							
		feather key DIN 6885 Sheet 1, A20 x 12 x 100							
	max.	1,261 Nm							
Moment of inertia J		0.114 kgm²
